Admin Dashboard Translation Integration Status

✅ Completed Files (2/11)

1. Settings Page

File: `app/[locale]/dashboard/admin/settings/page.tsx`
Status: ✅ Fully Integrated

Changes:
- ✓ Added `useTranslations` and `useLocale` imports
- ✓ Added translation hooks with namespace `dashboard.admin.settings`
- ✓ Replaced ALL hardcoded text with translation keys
- ✓ Updated DateDisplay components to include `locale` prop
- ✓ Translated: titles, descriptions, form labels, buttons, error messages
- ✓ Translated: fees section, payout section, general section

2. Payments Page

File: `app/[locale]/dashboard/admin/payments/page.tsx`
Status: ✅ Fully Integrated

Changes:
- ✓ Added `useTranslations` and `useLocale` imports
- ✓ Added translation hooks with namespace `dashboard.admin.payments`
- ✓ Replaced ALL hardcoded text with translation keys
- ✓ Updated DateDisplay components to include `locale` prop
- ✓ Translated: table headers, filters, status badges, dialogs
- ✓ Translated: payment details, user/creator info, refunds section

⌛ Remaining Files (9/11)

Files to Integrate:

1. **Payouts Main** - `app/[locale]/dashboard/admin/payouts/page.tsx`
2. **Payouts Dashboard** - `app/[locale]/dashboard/admin/payouts/dashboard/page.tsx`
3. **Logs** - `app/[locale]/dashboard/admin/logs/page.tsx`
4. **System Logs** - `app/[locale]/dashboard/admin/system-logs/page.tsx`
5. **Notifications** - `app/[locale]/dashboard/admin/notifications/page.tsx`
6. **Testing** - `app/[locale]/dashboard/admin/testing/page.tsx`
7. **Refunds** - `app/[locale]/dashboard/admin/refunds/page.tsx`
8. **Refunds Disputes** - `app/[locale]/dashboard/admin/refunds-disputes/page.tsx`
9. **Creator Stripe** - `app/[locale]/dashboard/admin/creators/[id]/stripe/page.tsx`

Integration Pattern

For each remaining file, follow this pattern:

1. Add Imports

```
import { useTranslations, useLocale } from 'next-intl';
```

2. Add Hooks

```
const locale = useLocale();
const t = useTranslations('dashboard.admin.{section}');
```

3. Replace Hardcoded Text

- Page titles: `{t('title')}`
- Descriptions: `{t('description')}`
- Buttons: `{t('buttonName')}`
- Table headers: `{t('table.columnName')}`
- Error messages: `toast.error(t('errors.errorType'))`
- Success messages: `toast.success(t('successMessage'))`

4. Fix Date Display

```
<DateDisplay date={someDate} format="datetime" locale={locale} />
```

Translation Keys Available

All translation keys are already defined in:
- `messages/en.json` - dashboard.admin.
- `messages/fr.json` - dashboard.admin.

Total keys available: ~1,190 across all sections

Next Steps

1. Continue with remaining 9 files using the established pattern
2. Test each integrated page in both FR and EN
3. Verify all functionality remains intact
4. Commit changes incrementally

Notes

- All DateDisplay components must include `locale` prop
- Use namespace specific to each section (e.g., `dashboard.admin.payouts`)
- Maintain all existing functionality and styling
- No hardcoded text should remain in JSX
